POLAR CARE WAVE ICE MACHINE

PROTOCOL FOR BETTER HEALING:
"LESS SWELLING, LESS PAIN"
Premium Cold Therapy with Compression

BENEFITS OF ICE THERAPY: Icing can help reduce swelling and pain, increasing your range of motion after surgery. You have the option to purchase a cold compression machine suggested below. This is NOT required and is an out-of-pocket Self Pay expense, but many patients find it helpful, and it is recommended by Dr. Shirley.

RECOMMENDED PRODUCT: Breg® Wave Ice Machine

Effective, convenient portable unit continuously circulates cold water for a more even and consistent temperature. It offers customizable treatment with adjustable cold and compression settings for targeted application for personalized care and optimized recovery. Many patients continue to use the device for 6-8 weeks post op, depending on recovery progress through physical therapy.
